---

Imagine I asked 1000 1000 people to choose a number between 0 0 and 999 999 (both inclusive, the numbers are not biased, they will be completely random) and write that number down. ...

The exponent of 13 on the factorisation of $1000!$ is $lfloorfrac {1000} {13}rfloor+lfloorfrac {1000} {13^2}rfloor$ do the same for $326!$ and $674!$ and you"ll find that ...

I understand that changing the divisor multiplies the result by that, but why doesn"t changing the numerator cancel that out? I found out somewhere else since posting, is there a way to ...

For example, the sum of all numbers less than 1000 1000 is about 500, 000 500, 000. So, 168 1000 × 500, 000 168 1000 × 500, 000 or 84, 000 84, 000 should be in the right ballpark. 76127 ...

Number of ways to invest $20, 000 $ 20, 000 in units of $1000 $ 1000 if not all the money need be spent Ask Question Asked 2 years, 11 months ago Modified 2 years, 11 months ago

I would like to find all the expressions that can be created using nothing but arithmetic operators, exactly eight $8$"s, and parentheses. Here are the seven solutions I"ve found (on the Internet)...

1 If a number ends with n n zeros than it is divisible by 10n 10 n, that is 2n5n 2 n 5 n. A factorial clearly has more 2 2 s than 5 5 s in its factorization so you only need to count how many 5 5 ...

Find the remainder when 777 7 7 7 is divided by 1000 Ask Question Asked 8 years, 6 months ago Modified 8 years, 6 months ago
