Is Africa ready to handle end-of-life PV wastes?

End-of-life PV wastes are projected to rise rapidly in Africa with expected rising influx of rooftop solar PV. The level of preparedness of Africa to handle the mounting wastes as per the current status of policy framework and infrastructural development were assessed and found to be inadequate.

Can BIPV systems be used in Africa?

Studies on the BIPV systems and their local integration in Africa are very limited, and they are yet to be widely deployed. However, some studies provided interesting insights into its potential. For example, a BIPV building was investigated in South Africa, which used rooftop tiles formed from solar PV.

Should African countries focus on repairing and dismantling end-of-life PV panels?

African countries should therefore emphasize on the related skills development programme in repairing, refurbishing, dismantling safety, and cannibalizing (for reusable spare parts) for the end-of-life or end-of-use PV panels amongst the African technicians.

How can African governments support rooftop PV?

As discussed in section 3.2, African governments may use renewable energy related policy tools to provide financial incentives to building owners to adopt rooftop PV. Governments can raise funds for this through phasing out fossil fuel subsidies (whilst protecting the poor).

Usa WhatsApp en tu navegador. Todas las funciones que te encantan: chats, llamadas, estados, compartir pantalla y más, en una pantalla más grande con la aplicación WhatsApp para iPad. Recibe ...

Procurement strategies that prioritize durable and adaptable technologies, as well as operation and maintenance plans that integrate early ...
