Does China's Yangtze River economic belt strategy reduce urban industrial wastewater discharge?

This study employs China's Yangtze River Economic Belt strategy as a quasi-natural experiment to investigate the impact of prioritizing green development on economic growth. Our empirical findings show that the strategy significantly reduces urban industrial wastewater discharge.

Does environmental protection affect economic growth in the Yangtze River region?

Overall, the analysis indicates that the protection and governance of the ecology in the Yangtze River region have not hindered regional economic growth but rather facilitated urban development and transition of the industrial structure toward the productive service industry.

How many urban clusters are there in the Yangtze River economic belt?

These urban clusters encompass a total of nine provinces and 73 cities, each characterized by distinct geographical locations, resource endowments, stages of industrialization, and levels of urbanization. These clusters are considered the "three poles" of the development pattern of the Yangtze River Economic Belt.

Does urban agglomeration reduce industrial wastewater discharge in Yangtze River Delta?

The implemented strategy leads to a significant reduction in industrial wastewater discharge of approximately 14.6% in Chengdu-Chongqing urban agglomeration and 11.9% in the middle reaches of Yangtze River urban agglomeration. However, there is no significant change observed in the treatment effect in the Yangtze River Delta urban agglomeration.

For this purpose, this paper uses the super-efficiency SBM model, ML index and Tobit model considering undesired output to explore the energy efficiency and the main factors affecting it ...

A subsidiary of China National Offshore Oil Corporation (CNOOC) has completed the construction of China's largest LNG storage base, a move that aims to ensure energy security and support ...
