Why should you choose an RV Solar System?

Charging from the sun is renewable energy at its best, meaning fewer fossil fuel emissions and less pollution on your trips. It feels great knowing you're camping sustainably. Overall, an RV solar system brings peace of mind and freedom. It's like having a mini power station riding on your roof - silently making power while you explore.

Do you need a solar installer for your RV?

Most handy RV owners can complete their own solar install with careful steps and patience. Don't rush -- measure twice, seal well, and test before powering devices. When in doubt, consult a professional electrician or solar installer. Especially for larger or complex systems, peace of mind is worth it.

What does Arvo Solar do?

As Arvo Solar states, "As the franchisor, Arvo Solar does all of the heavy lifting! We handle all designs, permits, utility approvals, arranging for all equipment, and installations! You are responsible for everything on the front end with regards to customer acquisition." But if you want a more hands-on approach, you have that option as well.

How many kWh does an RV Solar System use?

At 12V, that's around 2.4 kWh -- enough to run a modest RV setup off-grid for 2-3 days, depending on your usage. (To sanity-check that math against your real daily loads, use the worksheet approach in [How to Size Your RV Solar System](#).) rvoutfitting.com
