Who are the authors of solar photovoltaic system cost benchmark 2021?

Feldman,David,Vignesh Ramasamy,Ran Fu,Ashwin Ramdas,Jal Desai,and Robert Margolis. 2021. U.S. Solar Photovoltaic System Cost Benchmark: Q1 2020. Golden,CO: National Renewable Energy Laboratory. NREL/TP-6A20-77324.

What are the benchmarks for PV & energy storage systems?

The benchmarks are bottom-up cost estimates of all major inputs to typical PV and energy storage system configurations and installation practices. Bottom-up costs are based on national averages and do not necessarily represent typical costs in all local markets.

What are solar energy cost benchmarks?

These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. Read more to find out how these cost benchmarks are modeled and download the data and cost modeling program below.

What do we model for utility-scale stand-alone storage systems?

The major storage components we model for utility-scale stand-alone storage systems are the same as those summarized in Figure 17 (page 27) and Figure 18 (page 28) for the commercial stand-alone storage model. Table 8 lists our model inputs and assumptions for such a utility-scale energy storage system.

These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. Read ...

This review paper sets out the range of energy storage options for photovoltaics including both electrical and thermal energy storage systems. The integration of PV and energy storage in smart buildings ...

These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. Read more to find out how these cost benchmarks are ...

This article targets professionals who need actionable data on energy storage costs, whether for grid-scale projects, solar+storage hybrids, or portable systems.

The National Renewable Energy Laboratory (NREL) publishes benchmark reports that disaggregate photovoltaic (PV) and energy storage (battery) system installation costs to inform SETO's R& D ...

We use a bottom-up method, accounting for all system and project development costs incurred during installation to model the costs for residential, commercial, and utility-scale PV systems, with and ...

We show bottom-up manufacturing analyses for modules, inverters, and energy storage components, and we model unique costs related to community solar installations. We also account for PV ...

The ESSOP project has analysed the relative performance of these various options to assess them under typical port use cases. To minimize the dependence on grid-supplied electricity, ports are also ...
