Modern charging of lithium and nickel based batteries starts with a constant current, until a certain voltage and then a constant voltage until the current falls to some level that indicates end of ...

Accordingly to what I've found in several sources (user's manual of electronic devices, various forums, e.t.c.) I shouldn't charge my Li-Ion batteries in cold temperatures because this would ...

Where  $V_s$  is the charge voltage and  $v_c(t)$  the voltage over the capacitor. If I want to derive this formula from "scratch", as in when I use  $Q = CV$  to find the current, how would I go ...

Cell phone battery charging is handled through a battery charging IC. Typically a switching regulator that varies voltage and current in order to charge the battery. It also measures ...

3 My contribution is to point out a circuit that suits your title: "A path for capacitor's charging, and another for discharging it". It is a solution commonly used to drive a N-channel mosfet/IGBT in the ...

We designed a power board that can deliver 5V and 3V3. Those two voltages are provided by two boost/buck converters that can deliver 3A each. The board accepts power from a ...

The charging cycle for lithium ion batteries can be quite complex, especially in the case of multiple cells in series, but typically involves 4 basic steps: Read voltage, if lower than a certain value ...

How would I go about simulating a charging battery in LTSPICE? I've seen these two articles (A Tutorial on Battery Simulation - Matching Power Source to Electronic System and Accurate electrical battery ...
