How much is the Indonesia automation and control system market worth?

Image © Mordor Intelligence. Reuse requires attribution under CC BY 4.0. The Indonesia automation and control system market was valued at USD 119.34 billion in 2025 and estimated to grow from USD 129.46 billion in 2026 to reach USD 194.57 billion by 2031, at a CAGR of 8.49% during the forecast period (2026-2031).

Why should you invest in automation & control systems in Indonesia?

Greater Jakarta's rapid industrial development is significantly propelling Indonesia's automation and control system market. As a key industrial hub with multiple manufacturing facilities, industrial parks, and smart factories, the region has a high need for innovative automation solutions.

What is driving the growth of Indonesia's automation & control system market?

The increasing demand for automation solutions across various industries, including manufacturing, energy, oil and gas, and food and beverage, is driving the growth of Indonesia's automation and control system market.

How can Yokogawa support Indonesia's automation and control system market?

Yokogawa's water-treatment SCADA in Bali and multiple PLN excitation retrofits in South Kalimantan illustrate the steady pipeline that supports the Indonesia automation and control system market. 5G rollout combined with lower-cost sensors is allowing factories to link conveyors, compressors, and HVAC systems without rewiring.

Will High Initial Investment Costs Hinder the Growth of Indonesia Automation and Control System Market?

Many sectors in Indonesia continue to face significant challenges due to the high upfront ...

Presentation : Highly efficient, easy-to-deploy 50kW, 400V 3-phase uninterruptible power supply (UPS) that brings best-in-class power protection to edge, small and medium data centers, as well as to ...

Mitsubishi Electric's Micro PLC is one of the best-selling cost-effective models with high compatibility in the world. Every PLC offers unique advantages, from the ultra-small size to the wide application ...

Mitsubishi Electric's Micro PLC is one of the best-selling cost-effective models with high compatibility in the world. Every PLC offers unique advantages, from the ...

These dynamics place the Indonesia automation and control system market at the center of a broader industrial
