Dominica is situated in a geologically active volcanic region around the Caribbean plate, making it an ideal location for harnessing geothermal energy. The island alone has 1390 MegaWatts (MW) ...

The Caribbean island is building a power station that will use steam naturally heated by volcanic rock.

Dominica's geothermal project is set to deliver power to the island as well as the foundation for a large scale green hydrogen complex.

"Dominica, a country with one of the largest geothermal resources in the Caribbean, has the potential to develop a global, competitive, green hydrogen industry," he said.
