Energy storage neatly balances electricity supply and demand. Renewable energy, like wind and solar, can at times exceed ...

The battery storage industry in the U.S. has grown in leaps and bounds in recent years, surpassing its most aggressive targets to become one ...

About this report The US Energy Storage Monitor is a quarterly publication of Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP). Each quarter, new industry data is ...

Technological breakthroughs and evolving market dynamics have triggered a remarkable surge in energy storage deployment across the electric grid in front of and behind-the-meter (BTM).

The battery storage industry in the U.S. has grown in leaps and bounds in recent years, surpassing its most aggressive targets to become one of the largest new sources of power on the grid.

Energy storage neatly balances electricity supply and demand. Renewable energy, like wind and solar, can at times exceed demand. Energy storage systems can store that excess energy until electricity ...

Effective June 1, new renewable energy plants are no longer required to install energy storage systems in order to secure development rights and grid connection.

In 2017, the early leaders in energy storage made an audacious bet: 35 gigawatts of the new grid technology would be installed in the United States by 2025. That goal sounded improbable ...
