According to a new report from SolarPower Europe (SPE), 27.1 GWh were deployed in 2025, a 45% year-on-year growth, mostly powered by utility-scale systems. This confirms that ...

2025 marked the first year utility-scale overtook residential in MWh deployments; SolarPower Europe said all segments must accelerate growth to hit crucial EU targets.

This report looks at the emerging European utility energy storage segment and provides 10-year forecasts for 25 European countries. We forecasts the future growth based on co-location ...

Energy storage will reach beyond 215 GW by 2030 - with battery storage alone exceeding 160 GW. By the end of the decade, storage will be deployed at a rate of 20-25GW per year, which is more than ...

Europe's 2025 growth hinges on the large-scale utility battery projects set to come online in the course of the year. The large-scale battery ...

The report shows that utility-scale systems have become the main engine of Europe's battery storage expansion, delivering 55% of all new added capacity in 2025 and marking a clear ...

A watershed year for Europe's battery storage market emerged in 2025, as utility-scale systems became the main driver of expansion, delivering 55% of all newly added capacity.

While energy storage is expanding across the continent, not all markets are moving at the same pace. In 2025, several European countries stand out for their rapid uptake of home battery solutions--driven ...
