---

More importantly, the study provides information on how states can adapt their storage policies and targets to reduce greenhouse gas emissions faster and make utility scale energy storage projects ...

These projects must show a meaningful reduction of lifecycle greenhouse gases emissions or air pollutants, either via the process itself or via the end use of the ...

Concerns about the emissions of greenhouse gases and other potentially harmful pollutants warrant examination of the emissions resulting from the operation of energy storage systems. To fully ...

To promote the development of renewables, this article evaluates the life cycle greenhouse gas (GHG) emissions from hybrid energy storage systems (HESSs) in 100% renewable ...

Founded in 1991, the remit of the GHG TCP is to evaluate options and assess the progress of carbon capture and storage, and other technologies that can reduce ...

Founded in 1991, the remit of the GHG TCP is to evaluate options and assess the progress of carbon capture and storage, and other technologies that can reduce greenhouse gas emissions derived ...

The topic of greenhouse gas (GHG) emissions accounting for battery energy storage systems (BESS) is relatively new and so has not yet been thoroughly addressed by existing organization-level GHG ...

Here, we analyse approximately 2,000 (low-carbon) hydrogen projects worldwide, encompassing operational and planned initiatives until 2043, ...
