How can federal agencies implement on-site distributed energy projects?

Federal agencies can implement on-site distributed energy projects to help meet federal distributed energy goals and requirements using various procurement options. The Web tool is used to optimize energy systems for buildings, campuses, communities, and microgrids.

What services are included in a solar PV contract?

The services included by the contractor shall include operation and maintenance of all components of solar PV systems for the life of the contract, as detailed herein.

Who determines the final content of a solar PV solicitation?

Agency contract officers, attorneys, and engineers are responsible for determining the final content of any solicitation. Updated to the regulations, codes, and standards applicable to solar PV are changing frequently; it is the responsibility of agency managers to determine which guidelines (and which versions) apply. Figure 1.

Can a PV system be included in a future micro-grid?

In addition to connecting and operating in a grid-interactive mode, the Contractor's proposed PV system shall be capable of being included in a future micro-grid that can operate when the utility grid is unavailable. This micro-grid could include conventional (engine) generators, other renewable resources, and/or energy storage.
