How do you maintain a lead-acid battery?

By following these maintenance practices, you can significantly extend the life of your lead-acid batteries and ensure optimal performance in all your applications. Store batteries in a cool, dry place. The ideal temperature for storage is between 10°C and 25°C.

Do lead-acid batteries need maintenance?

Lead-acid batteries discharge over time even when not in use, and prolonged discharge can permanently damage them. By following these maintenance practices, you can significantly extend the life of your lead-acid batteries and ensure optimal performance in all your applications.

How often should a lead acid battery be charged?

Lead-acid batteries can lose their charge over time, even when not in use. Check the charge at least once every three months and recharge if the voltage drops below 70% of its full capacity. Keep track of charging status during storage. Use a maintenance or float charger to keep the battery charged at an optimal level without risk of overcharging.

What are lead-acid batteries?

Lead-acid batteries are one of the oldest and most widely used energy storage technologies in the world. Their reliability and cost-effectiveness make them ideal for a variety of applications.
