How much does hospital equipment cost?

Equipment spending scales proportionally with facility size, from \$650,000 at critical access hospitals to \$12.5 million at large facilities. Maintenance costs account for 40% of total equipment budgets across all hospital sizes, underscoring the importance of factoring ongoing service expenses into capital planning.

How much energy does a hospital use a year?

A typical US hospital uses, each year, about 2.9 kilowatt-hours (kWh) of electricity and 9625 Btu of natural gas per square meter. Lighting, space heating, and water heating represent about 65% of total energy use. But that doesn't make those uses the most important - unless you're looking for energy savings.

What is the largest capital expenditure category for healthcare facilities?

Medical equipment is the largest capital expenditure category for healthcare facilities, with costs varying dramatically by technology level and manufacturer specifications. Key Insights:

How do UK hospitals governed by the health technical memorandum 06-01?

UK hospitals (for example) are governed by the Health Technical Memorandum 06-01: electrical services supply and distribution. This 183-page document doesn't offer a model solution. However, it does give a broad basis for designing within the patient environment and UK specific requirements.
