Energy Storage Solution uses the battery pack optimizer, ensuring more useable energy for peak shaving, smart rack controller, ensuring constant power output for frequency ...

The Peak Shaving function can reduce the maximum peak power obtained from the grid during peak hours by configuring the power supply power in self-use mode or TOU mode, thereby ...

This mode maximizes the PV energy fed to the grid. When the generated PV energy in the daytime is greater than the maximum output capability of the inverter, the ESS is charged to store energy.

The PV+ESS+Charger Solution integrates the PV system and energy storage system (ESS) with a charger to charge vehicles, which also helps save electricity costs through peak and off-peak ...

Improve energy storage system efficiency with enhanced safety and optimal performance.

Log in to the FusionSolar app as an owner, tap the charger icon on the home screen, choose Settings > Advanced Settings, and enable Identity Authentication. Then, start charging using the app, ...

Accordingly, it can optimally control the charging and discharging of energy storage under three different scenarios: sunny days, cloudy and rainy days and smart homes mode.

After this function is enabled, the system automatically switches to the PV power charging mode when detecting that the phase switching conditions are met. To ensure charging safety, the ongoing ...
