How does the IP55 outdoor server rack work?

The cabinet design allows natural wind cooling through filtered vents on the front door and venting under the lip of rain hood. The IP55 outdoor server rack also has two or four fans with a dust-proof cover located at the top of the cabinet for greater airflow/cooling.

What power configurations does the outposts network rack support?

The Outposts network rack power shelf supports one power configuration. A central power bus bar in the back to distribute power to each server. We have whips supporting a variety of common power types. Each Outposts compute rack supports 10KVA-30KVA power supply and redundant feeds. Each Outposts network rack requires 8.89 KVA power supply.

What are outposts racks?

Outposts racks are designed for high availability with redundant network switches and power connections. You can also provision your Outpost compute racks with additional capacity for resiliency. AWS delivers the Outposts racks to your preferred physical site fully assembled and ready to be rolled into final position.

How many fans does the IP55 outdoor server rack have?

The IP55 outdoor server rack also has two or four fans with a dust-proof cover located at the top of the cabinet for greater airflow/cooling. The fans are serviceable and the front door dust filters are easily accessible for cleaning. All fixtures are internal to the cabinet to provide a secure solution.
