US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.

Storage demand continues to escalate, driven by the pressing need to decarbonise economies through renewable integration on the grid and by load increases from data centre ...

The global energy storage systems market recorded a demand was 222.79 GW in 2022 and is expected to reach 512.41 GW by 2030, growing at a CAGR of 11.6% from 2023 to 2030. Growing demand for ...

The global energy storage systems market recorded a demand was 222.79 GW in 2022 and is expected to reach 512.41 GW by 2030, growing at a CAGR of ...

In all, the power sector made up three-fifths of the total increase in global energy demand. Renewables accounted for the largest share of the growth in total ...

To support the global transition to clean electricity, funding for development of energy storage projects is required. Pumped hydro, batteries, hydrogen, and thermal storage are a few of the...

In all, the power sector made up three-fifths of the total increase in global energy demand. Renewables accounted for the largest share of the growth in total energy supply (38%), followed by natural gas ...

The report shows there is a growing appetite across the country for deployment of grid-scale energy storage, as utilities, regulators, and communities further integrate the ...
