How many batteries will be installed at kilokri in South Delhi?

The country's first commercially-approved standalone battery energy storage system (BESS) capable of four-hour daily supply being set up at Kilokri in South Delhi will become functional soon, power company BSES said on Monday. Under the project, out of 12 liquid cooled batteries, nine have been installed and the rest will be installed shortly.

Why should India invest in a Bess storage facility?

With a significant increase in renewable energy generation capacity, it is imperative that storage facilities are developed to help India and the world transition to clean energy. With an annual tariff nearly 55% lower than the previous benchmark, the project sets a new standard for BESS affordability in India.

How will BSES solar power system improve power supply in kilokri?

Once deployed, the system will improve power supply covering one lakh residents of Kilokri, a heavily congested, low income area in South Delhi, BSES said in a statement. The 20 MW cluster of batteries are capable of providing four hours of power every day- two hours each during the day and at night.

How long will Bess battery last?

It is the country's first commercially approved standalone BESS at the distribution end which will contribute to clean energy transition and integration of renewable energy integration, the statement said. The project has a life span of 12 years and will use Lithium-iron-phosphate batteries that are considered most advanced, it said.

Located at the high-demand at the Kilokari substation, the project is expected to improve power quality and enable 24/7, reliable power in the area for over 12,000 low-income consumers.

Discover how cutting-edge battery materials are revolutionizing energy storage in New Delhi and driving India's transition to renewable energy.
