The three-tiered, 300-kW/386-kWh grid-tied system is capable of providing grid stabilization, microgrid support, and on-command power ...

The three-tiered, 300-kW/386-kWh grid-tied system is capable of providing grid stabilization, microgrid support, and on-command power response. The three tiers of batteries are ...

If the microgrid is grid-connected (i.e., connected to the main electric grid), then the community can draw power from the main electric grid to supplement its own generation as needed or sell power back to ...

SEL powerMAX microgrid control systems keep the lights on, seamlessly islanding onsite generation sources and reconnecting with the bulk electric system as ...

Support the collaborative operation of multiple energy sources, including wind power, PV power, diesel generators, and the power grid; The switching time between grid-connected and off-grid modes is ...

Compact microgrid controller integrated with field proven control systems, for low operating costs and a resilient microgrid.

Grid-connected microgrids are designed to synchronize with the main power grid. They operate in conjunction with the utility grid, allowing for bi-directional power flow. In this mode, the ...

SEL powerMAX microgrid control systems keep the lights on, seamlessly islanding onsite generation sources and reconnecting with the bulk electric system as needed. They're efficient, reliable, and ...
