-----

With a capacity of 50 MW, this supersized structure is designed to float on the ocean's surface and can withstand typhoons, according to the company, which plans to start making the ...

Modern commercial wind turbines produce electricity by using rotational energy to drive an electrical generator. They are made up of one or more blades attached to a rotor and an ...

China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.

Pattern Energy recently broke ground on SunZia Wind and Transmission, a huge, 3.5-gigawatt wind farm that will send power from New Mexico to California via a 550-mile transmission line.

Video. Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up.
