-----

This work investigates the coordinated optimization of a DC distribution network consisting of solar PV systems, substation, and loads, through the control and coordination of voltage ...

Optimal solar photovoltaic system locations and sizes in electrical distribution networks are derived using a novel Archimedes optimization algorithm in order to minimize network ...

Retaining its Art Deco feel and décor, the building has been converted into a DC-powered building featuring cutting edge green technology. Opening in the summer of 2019, the building is also serving ...

Investigate DC power distribution architectures as an into-the-future method to improve overall reliability (especially with microgrids), power quality, local system cost, and very high-penetration PV ...

In this research, demand response impact on the hosting capacity of solar photovoltaic for distribution system is investigated.

Using low-voltage DC as power decoupling bus of the pre-stage and last-stage of the converter, a multi-port control strategy is proposed to coordinate the power flow of PV, energy storage and output ports ...

holistic view of the possibilities of direct current (DC) in power distribution solutions, ranging from high voltage grids down to low voltage direct current (LVDC) power distribution applications.

This paper enables researchers to understand the research status, research frontier and future research direction of distributed PV, providing guidance and reference for future in-depth ...
