Is a room containing electrical equipment controlled by a lock accessible?

Rooms or enclosures containing electrical equipment controlled by a lock are considered accessible to qualified persons[110.26 (F)]. Remember, the NEC and OSHA give the minimum working space distances for various types of conditions. Those are not the average, maximum, or target distances.

What are the requirements for egress from a working space?

For large equipment containing overcurrent, switching, or control devices, an entrance to (and egress from) the required working space at least 24 in. wide and 6' ft high is required at each end of the working space [110.26 (C) (2)]. This requirement applies for either of the following conditions:

How far should a person with EMF sensitivity go?

Based on findings like these, a minimum safety distance of 1/4 mile (1320 feet) might be considered prudent. And again, individuals with EMF hypersensitivity or other serious health issues may want to consider a much greater safety distance, perhaps a half mile, or even more.

Should a dedicated electrical room be used for storage?

Dedicated electrical rooms should never be used for storage, and a clear path of travel should be maintained for emergency egress. Oftentimes, these rooms become a catchall for everything from spare light bulbs to office supplies. Inspectors should report on relevant findings in their report.
