Thank you I understand, but after you input them into the first derivative which is the slope of the function, you get the value of the maximum or minimum slope dependent on the value ...

The outdoor integrated power supply is designed for those scenes with limited space and complex environment, and has won wide recognition in the market for its compact size, excellent adaptability ...

This solar power system is designed for hybrid solar power based outdoor telecom applications. The hybrid solar system is designed to be compatible with a 19-inch rack and is 9U in height mainly ...

What is the difference between the minimum value and the lower bound of a function? To me, it seems that they are the same.

Minimum number of directed edges to contain every Hamiltonian cycle or its inverse [closed] Ask Question Asked 18 days ago Modified 18 days ago

Designed for remote locations, it integrates solar controllers, inverters, and lithium battery packs to ensure stable and continuous power for telecom equipment, surveillance systems, and off-grid ...

How can I prove that the minimum of two exponential random variables is another exponential random variable, i.e. $Z = \min(X, Y)$

Normally, I would not say that the maximum can be less than the minimum. A local maximum can be less than a local minimum, of course, and they can be equal, too.
