The Sweden Solar System is the world's largest permanent scale model of the Solar System. The Sun is represented by Avicii Arena in Stockholm (still known by most as Globen), the largest hemispherical ...

Well, there's only one star in the Solar System: the Sun, so it's the automatic winner here. The Sun measures 1.4 million km across.

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is located in the Milky ...

Astronomers have discovered the largest known solar system, consisting of a large planet that takes nearly a million years to orbit its star.

The scale of our Solar System is gigantic. There's more to our cosmic neighbourhood than eight planets and an asteroid belt.

Trappist-1 in the constellation of Aquarius is currently the largest solar system that we have so far discovered. The solar system contains 7 ...

Discover the size and scale of the solar system, informations about celestial bodies and their distances from the sun.

The Sun is about 109 times wider than Earth and contains roughly 99.86% of the Solar System's mass -- a dramatic reminder of scale before we even name the planets. Its diameter is ...
