Who are kVA power?

KVA Power are specialists in server room UPS systems and offer a wide range of uninterruptible power supply solutions to suit all budgets and requirements. Based in Bolton, Greater Manchester, we are ideally located to supply, install, maintain and hire uninterruptible power supplies throughout the whole of the UK.

What is the voltage of a 20 kW UPS?

The voltage is 1.6 to 1.75 per cell depending on discharge ratio. NOTE: Runtimes are given at power factor 1 with 100% load. NOTE: The 20 kW input isolation transformer is not active when the UPS is in battery operation. The potential runtimes can therefore exceed the time limitations in overload capacity of the UPS when in normal operation.

How do I enable overcurrent protection on my energy storage device?

Contact Schneider Electric to enable this function. Protection of the energy storage device: An overcurrent protective device must be located in close proximity to the energy storage device. Failure to follow these instructions will result in death or serious injury. All wiring must comply with all applicable national and/or electrical codes.

From scenarios and installation to maintenance and future trends, practical application of battery module cabinets requires solutions that are both reliable today and adaptable tomorrow.

Highly efficient, easy-to-deploy 10kW, 400V 3-phase UPS that brings best-in-class power protection and low total cost of ownership to edge, small and medium data centers, as well as ...

Our inhouse team of certified field service engineers are positioned strategically across Great Britain. They come well-equipped with MTU training, HETAS, BOAS, and Gas Safe accreditations, meaning ...
