How much energy does Uganda use?

The combined energy use of domestic aviation, rail and marine transportation is just above 5%. Uganda still imports all of its finished oil products. However, plans for the country's first refinery are underway, which will process new oil production coming online in 2025.

What are the five energy goals of Uganda?

The five goals are universal access by 2030; modernising and growing the energy systems to support economic growth; improving energy security and affordability; mitigating energy-sector greenhouse gas emissions; and positioning Uganda as a regional energy hub. These goals were reaffirmed in the 2023 National Energy Policy.

How can Uganda improve its energy security?

Fortunately, the country is blessed with vast domestic renewable energy resources, in addition to its oil deposits. Harnessing a diverse mix of energy resources in a sustainable manner can help to improve the country's energy security, supporting Uganda's 2040 Vision.

How does Uganda modernise its energy supply?

Uganda modernises its energy supply while meeting growing demand, pivoting from bioenergy as the primary source of energy supply to low-emissions power inputs in 2050. \*Includes solar, wind, geothermal, hydro and nuclear. Note: PJ = petajoules.

The plan was developed by Uganda's Ministry of Energy and Mineral Development, with support from the International Energy Agency, and provides the groundwork for the government's upcoming ...

**FOREWORD** The role of government is to formulate appropriate policies, legal and institutional frameworks that can attract adequate financing to reinforce Uganda's energy security so that there is ...

The Government of Uganda has issued a Gazetted Policy Direction authorising the development of a 100-megawatt-peak (MWp) solar PV plant with ...

By integrating intermittent renewable sources, enhancing grid stability, expanding energy access, and fostering economic growth, BESS can accelerate Uganda's ambitious goals of universal...

Uganda has ample potential for solar, hydroelectric and geothermal power. With the opening of the Tilenga
