What is the European energy storage inventory?

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the first European-level tool of its kind and offers energy storage data across a full range of technologies.

How does energy storage work in the EU?

The main energy storage method in the EU is by far 'pumped storage hydropower', which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example on a sunny or windy day - and releasing it when more energy is needed.

How well does the storage market perform in Europe?

Market Performance: According to authoritative market analysis reports (e.g., EUPD Research, BNEF tracking for specific markets), held approximately 30% of the European storage market share during specific periods (e.g., first half of 2023), showing strong performance especially in the residential storage sector in countries like Germany and Italy.
