RoMa is a robust dense feature matcher for estimating pixel-dense warps and certainties in image pairs, with demos available.

How to adjust the coarse_res and upsample_res parameters to the optimal state? #110

I recently found that slightly modifying the coarse_res and upsample_res parameters will cause a sharp decrease in the number of matching points when running RoMa for matching.

Hi, thanks for this great repo. I was wondering from where i can change max number of features and matches that model will detect and try to match, similarly where is the threshold value ...

Why do you set the GradScaler growth_interval=1e6? Is this just randomly chosen, or were you facing some stability issues with the default parameter ...

Would it be possible to get the parameters used to generate the results? I am getting quite poor results for keypoint matching on the ScanNet test case

Hi Author, Do you use the megadepth dataset from 0000 to 5014 as training set like the 1st and 2nd images show? 2. When prep_info's corresponding Undistorted_sfm has both dense0 and ...

I am doing some epipolar work, however, I found that rotational part of T_1to2 differs much from what I solved from matching pairs. And sampson distance calculated from T_1to2 and ...
